

## **Laser 360**

Looking to turn back the clock on fine lines and wrinkles? Laser 360° combines multiple laser, light and radio frequency treatments to address the key concerns of your skin:

Pigmentation, texture, tone and tightening.

Approved by the FDA, these advanced technologies provide our clients the most safe and effective treatments available.

Core components of a Laser 360° Therapy include:

1. Pixel Laser Skin Resurfacing restores healthy, youthful skin texture and tone with increased comfort and less downtime.
2. Harmony AFT Skin Rejuvenation, Advanced Fluorescence Technology delivers safer and effective treatments on sun/age spots. Laser 360 evens out your skin's color and reduces any tiny broken blood vessels. With the use of focused light a broad spectrum of color irregularities in the skin can be treated successfully.
3. Skin Tightening (ST) improves skin firmness and elasticity with less pain by using near-infrared light to create deep heating of the body which facilitates the skin's remodeling.

### **What will skin look like after treatment?**

The Laser360 treatments are safe, comfortable, and effective without surgery or downtime. You can expect your skin to be somewhat flushed after the treatment, similar to a mild sunburn, which should subside in about 48 hours. Makeup can be applied immediately after treatment.
