

## **Skin Rejuvenation**

Facial Rejuvenation was designed to combat the effects of aging and damaged skin in a softer, gentler way. It can be used to treat the full face, neck, chest and even the hands to give them a more youthful appearance.

Using the Advanced Fluorescent Technology system, precise amounts of light energy enter through your skin's surface. The energy is delivered at specific settings for each treatment to maximize your results. The light energy stimulates the production of collagen. As the new collagen forms, it softens the appearance of aging skin. Fine lines and wrinkles are decreased.

### **Is Skin Rejuvenation treatment safe?**

Treatment is very safe for the skin. There are many advances in the Harmony technology that make it unparalleled for skin safety, without compromising effectiveness for treatment. There is no long term health hazards from light used in the Harmony. Both have been used for decades in medicine, surgery, and aesthetics without adversity.

### **Does the treatment hurt?**

The sensation is often described as “hot pinch”, or “snapping” feeling. The sensation only lasts for fraction of a second, and you may feel warmth or a tingling sensation for a short time afterward. Most people tolerate treatment without topical anaesthetic, but individuals who are more sensitive may prefer to have the skin numbed before treatment.

### **When can normal activities be resumed after treatment?**

This procedure is associated with only mild discomfort. After treatment with Advanced Fluorescent Technology, the treated skin may appear a little flushed and capillaries may seem to be more visible. The flushed look soon fades away, and the capillaries appear to vanish, leaving the skin looking younger. Most importantly, there is no downtime!

### **What happens after each treatment?**

Temporary pinkness in the skin lasts a very short time, and most people return to work or normal activities immediately after treatment. The improvement in pigmented and vascular irregularities can often be appreciated by the time you return for your next treatment a month later. Brown spots temporarily go darker before they lighten.
